

# Model PM100 Patty Machine

The PM100 hamburger patty machine is a must for the modern butchery to get a quick packaging of hamburgers, already wrapped in cellophane. Automatic operation is the PM100's greatest merit - it only requires pressure on the lever to compress the meat and, as the lever returns, it automatically opens the press and removes the hamburger.

Made of anodised aluminium, the PM100 will keep its silvered finish permanently. The parts in contact with the meat are made in stainless steel and easily removable for cleaning without tools.
