

IMPRESSIVE ENTRY TURNSTILES

• CLASSIC TURNSTILES

The classic Wanzl turnstile design. In efficient use for many years and ideal for many applications. Controls access through entrances and exits with minimum space requirements. Can be installed on uprights or on the wall with a mounting plate for space-saving installation.

Classic mechanical

Turnstile with three arms in enclosed steel or stainless steel housing, turns either to right or left. Passage only in one direction, the opposite direction is locked. Also available with optional anti-panic feature.

Classic electro-mechanical

Turnstile with three-arm turnstile in enclosed steel or stainless steel housing, with operating panel as standard feature. Can be controlled on one side or both sides. The electro-mechanical versions are locked when the power supply is switched off. Also available with optional anti-panic feature..

Design

Housing of steel panels, with coloured plastic coating, or of stainless steel.
Hub of cast aluminium.
Turnstile bars of stainless steel, joint with engaging bolt high-gloss chrome plated. Uprights of stainless steel.
Steel plate wall mount, with coloured plastic coating.

Price on application.

TURNSTILES

• PORTEC TURNSTILES

Track-proven and reliable entrances and exits in mechanical or electromechanical versions for safe single authorisation and high pedestrian frequency. Electro-mechanical versions equipped with LED functional indicator lamps in the entrance and exit directions.

TURNSTILES

• SIRIO TURNSTILES

Elegant turnstiles with enclosed stainless steel housing in mechanical or motor-driven versions. Sirio turnstiles look good everywhere and also blend well into sophisticated architectural environments.

Sirio mechanical

- Available as 3-arm turnstile
- Passage only possible in one direction, opposite direction blocked
- Reliable single authorisation
- Also available with optional anti-panic feature

Sirio motor-driven

- Available as 2 or 3-arm turnstile
- Reliable single authorisation, high traffic throughput
- Programmable turnstile control
- Can be adapted to suit individual customer requirements
- Can be integrated into the building security management system
- Interface for access control and time recording systems
- Also available with optional antipanic feature

Operating panel

Up to two turnstiles can be connected to an operating panel. All necessary entries can be made from a keyboard. Current operating statuses and counter totals can be viewed, and error and warning messages appear on the display.

Accessories

- LED clearance signal indicator lamps (illustration above) in direction of entrance and exit
- Climbing guard with acoustic alarm
- Sensors for non-contact clearance
- Accumulator battery buffer
- Elegant channelling elements in keeping with the attractive design of the Sirio turnstiles

Anti-panic feature

The folding arms for the mechanical version of the Sirio turnstiles open the barrier in the direction of the exit in the event of an emergency.
